

RECESSED EXTENSION RING

MODEL LVRER

FEATURES:

These extension rings are a great solution to cover ceiling openings that are larger than the diameter of a regular escutcheon. In earthquake zones where seismic considerations must be taken into account, contractors may create a 1" annular space around the sprinkler head to allow a small amount of movement, of the ceiling, or sprinkler pipe, without damaging the sprinkler system.

- Available in chrome or white finish
- Sizes: 4-1/2" or 5" OD
