

PLASTIC PLUG AND CHAIN

MODEL LVPPC

DESCRIPTION:

The Lansdale Plastic Cap with Chain, Model LVPPC are intended to protect the female hose valve threads from any type of vandalism or other damage. Since plastic is inexpensive and has no scrap value, these are used in lieu of brass or bronze plugs that are very often stolen for their scrap value. These caps feature a lug design for ease of installation/removal and are supplied with a chain that attaches to the valve to prevent loss.

- Plug: Injection molded ABS
- Chain: Steel with brass finish
- Color: Red
- Sizes: 1-1/2 MNST; 2-1/2 MNST

INSTALLATION:

When installing the plug make sure the threads are free of any debris, and thread the plug into the valve until tight (do not over tighten); attach the chain to the body of the valve where indicated by the valve manufacturer. **DO NOT USE ANY TYPE OF THREAD SEALANT OR THREAD TAPE WHEN INSTALLING THE PLUG.**

CAUTION: Hose valve plugs both brass or plastic are not designed or rated to be put under pressure, therefore do not pressurize as serious bodily injury can occur.
