

WATER SHIELD

MODEL LVWS

FEATURES:

Water shields protect the heat sensing element of the sprinkler head from sprinkler heads that may discharge at a higher elevation.

They are often used in intermediate level rack installations, and should be used in any area, where water shielding is necessary, often outdoors to act as a weather shield.

- One piece aluminum construction for 1/2 " or 3/4" IPS sprinklers. 4" OD x .030"

| SIZE | DESCRIPTION | BOX QTY. |
